

Kristoffer Dave Roa

BSIT-3

1. Website Name: Facebook

2. Is it responsive?

Yes. Facebook is a responsive website. It automatically adjusts its layout to fit different screen sizes, such as desktops, tablets, and smartphones.

3. What changes on Mobile?

- The layout becomes a single-column design for easier scrolling.
- The navigation menu is simplified and optimized for touch.
- Icons and buttons are larger for easier tapping.
- Content is stacked vertically to fit smaller screens.
- The interface is designed to be faster and easier to use on mobile devices.

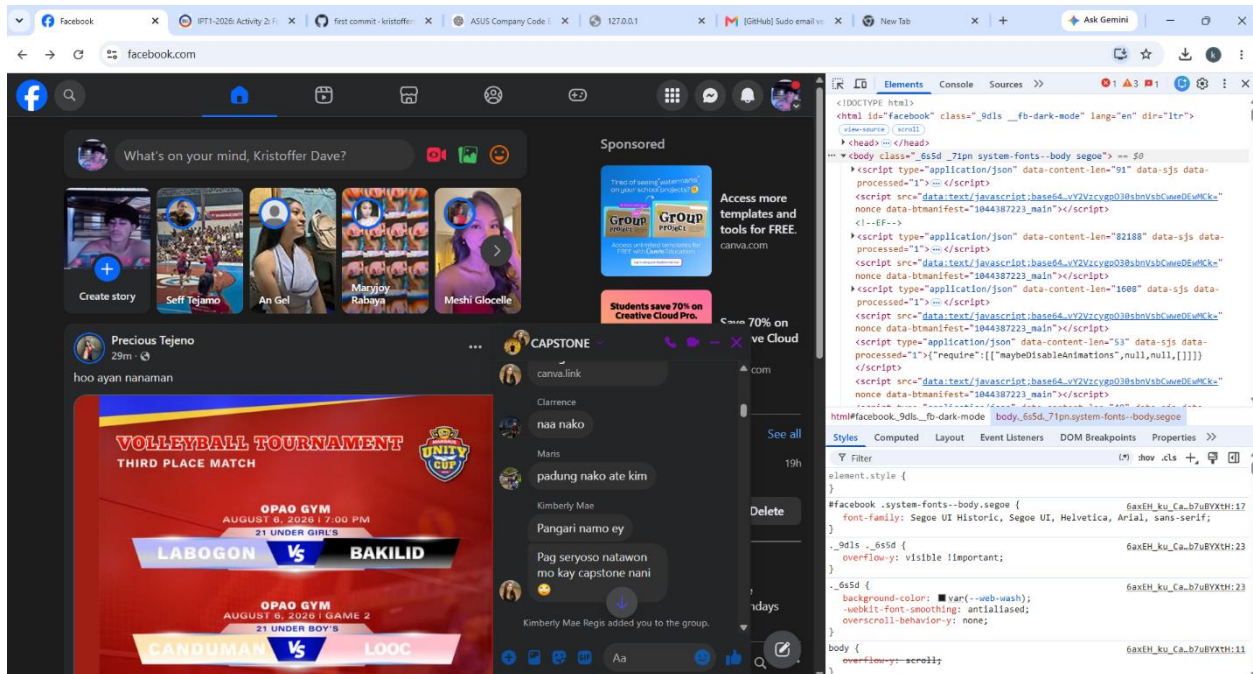

4. What changes on Desktop?

- The screen uses a multi-column layout.
- The left sidebar shows shortcuts and menus.
- The center column displays the news feed.
- The right sidebar shows contacts, chats, and suggestions.
- More information is visible at the same time because of the larger screen.

5. What do you like about the design?

I like Facebook's design because it is clean, simple, and easy to navigate. The blue and white color scheme is easy on the eyes, and the icons are clear and recognizable. The responsive layout provides a good user experience on both desktop and mobile devices, making it easy to browse, communicate, and find information.

6. Screenshot desktop.

7. Screenshot Mobile.
